## Week 1

## By Rachel Huang and Jackson Maris

University of North Carolina Wilmington Statistical Data Mining and Machine Learning May 25, 2018

## Outline

## Project 1:

- Numerical and graphical summaries of age and gender using the MORPH-II partial dataset

## Project 2:

- Analyzing the relation between age, gender and race using the entire MORPH-II dataset

## Project 3:

- Creating regression models and classifying data from the MORPH-II partial dataset

## Project 1

## Process:

- Two vectors were created for age and gender.
- The 7th character from the end of the filename, either "M" or "F", indicates gender.
- The 6th and 5th characters from the end of the filename indicate the age.
- The remaining 2,568 columns are the corresponding Bio-Inspired Features (BIF) for each person.

| $\Delta$ Filename | BIF1 | BIF2 | $\hat{*}$ | BIF3 | $\hat{} 1$ |
| :--- | :--- | :--- | :--- | :--- | :--- |
| BIF4 | BIF5 |  |  |  |  |
| $\mathbf{1}$ | 022066_01M64.JPG | 204 | 204 | 199 | 203 |

Part of a row in the dataset.

## Project 1 Age Analysis

Numerical Summary of Age

| Min | Q1 | Median | Mean | Q3 | Max |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 16 | 23 | 32 | 32.41 | 40.25 | 70 |

## Project 1 Age Graphs

NUMERICAL SUMMARY OF GENDER

|  | Male | Female |
| :---: | :---: | :---: |
| Frequency | 843 | 157 |

## Project 2

## Process:

- Analyzed the difference between a clean and dirty data set.
- Looked at relationship between:
- Gender and race
- Gender and additional arrests
- Combining the partial and full Morph-II data sets

## Project 3

## Process:

- The first 20 BIF points were used to calculate the linear, quadratic and polynomial regressions.
- Logistic regression used the entire BIF data set to build models.

Unfinished:

- LDA, QDA, and KNN
- Splitting the data into training and testing data
